GETTING STARTED 01

Welcome to Vertex

Vertex is a workout planner and tracker built for people who actually train. You build your own workouts from a library of exercises, drop them onto a weekly planner, and track every set as you go. Health metrics from Apple Health sync in automatically, and an AI Coach makes recommendations based on your recent volume and recovery signals.

Everything syncs across your devices through your account, so the workout you planned on your laptop is waiting on your phone when you walk into the gym.

What you can do

Build	Create custom workouts from a curated exercise library, or load a template (Push, Pull, Legs, Full Body, and more).
Plan	Assign workouts to specific days of the week. Your weekly view shows what's coming and what's done.
Train	Tap Start on Today's workout for a guided session with timers and set tracking.
Track	See volume trends, PRs, consistency, and weekly intelligence across the Progress tab.
Recover	Log sleep, weight, body composition, and let Vertex factor recovery into your training recommendations.

PRO TIP

You don't need to install Vertex to use it — the web version at vertex-beta-five.vercel.app works in any browser. But installing it as a PWA gives you a home-screen icon, full-screen mode, and faster startup. The next page shows how.

GETTING STARTED 02

Install on your device

Vertex is a Progressive Web App (PWA), which means you install it directly from your browser — no app store, no download. Once installed, it lives on your home screen or desktop like any other app, runs full-screen, and works offline for the things that don't need a network.

Before you start: open vertex-beta-five.vercel.app in the browser you want to install from. The install option only appears once the page has loaded.

iPhone & iPad

- 01 Open vertex-beta-five.vercel.app in Safari (must be Safari, not Chrome).
- 02 Tap the Share button — the square with an arrow pointing up.
- 03 Scroll down and tap "Add to Home Screen".
- 04 Tap "Add" in the top right. The Vertex icon appears on your home screen.

Android

- 01 Open vertex-beta-five.vercel.app in Chrome.
- 02 Tap the three-dot menu in the top right.
- 03 Tap "Install app" or "Add to Home screen".
- 04 Confirm. Vertex installs and opens like a native app.

Mac (desktop)

- 01 Open vertex-beta-five.vercel.app in Chrome, Edge, or Arc.
- 02 In the address bar, click the install icon (a small monitor with a down arrow).
- 03 Click "Install" in the dialog.
- 04 Vertex opens in its own window and appears in your Applications folder.

Windows (desktop)

- 01 Open vertex-beta-five.vercel.app in Edge or Chrome.
- 02 In the address bar, click the install icon on the right side.
- 03 Click "Install".
- 04 Vertex appears in your Start menu and pins to your taskbar if you want.

HEADS UP

On iPhone, you must use Safari to install the PWA — Chrome on iOS does not support home-screen install. After install, Vertex runs through Apple's WebKit either way, so there's no real difference in performance.

GETTING STARTED 03

Sign in & first launch

When you open Vertex for the first time, you'll see the sign-in screen. Vertex uses Supabase for authentication — your account is the same whether you sign in on iPhone, Android, or desktop, and your data syncs automatically.

SIGN-IN SCREEN

Continue with Google for the fastest sign-in — one tap, no password to remember. Or use email and password if you prefer. Choose "Create Account" the first time and "Sign In" on every visit after.

Your first session

- 1 Onboarding**
 A 3-step welcome modal appears the first time you sign in. It walks through Build, Plan, and Train. Click through or tap Skip — it only shows once.
- 2 Land on the Workout tab**
 You arrive in the workout builder with the exercise library on the left and an empty builder on the right.
- 3 Pick a starting point**
 Either build a workout from scratch by tapping exercises in the library, or load a template (Push, Pull, Legs, Full Body) from the Template Manager on the home tab.
- 4 Save & assign**
 Save the workout, then assign it to a day in your weekly planner. You're ready to train.

USING THE APP 01

Layout & navigation

The Vertex interface has three persistent regions: the header bar across the top, the main content area in the middle, and (on desktop) a sidebar on the left and a utility panel on the right. On mobile, the side panels collapse – the right panel becomes a tap-to-expand accordion under the Today card.

Logo	Top-left. Brand mark – also indicates which deployment you're on.
Tab bar	Center. Switch between Home, Workout, Progress, Health, and AI Plan.
Sync pill	Top-right. Shows real-time sync state: Synced (green), Saving (yellow), Unsaved (orange), or Failed (red).
Save / Log buttons	Top-right. Visible only on the Workout tab. Save stores your workout to the library; Log records it as a completed session.
Account menu	Top-right hamburger. Sign out, see which account is active, manage authentication.

SYNC PILL KEY

Green Synced means your last change saved to Supabase. Orange Unsaved means there's a change waiting – Vertex auto-saves within 500ms, so this rarely sticks around. Red Failed means something went wrong; refresh and check your connection.

TAB WALKTHROUGH HOME

Home

Home is where you start your training session and see the week ahead. It collects everything you need to make a "what should I do today" decision in one view.

Home tab Today card, weekly planner, and weekly intelligence panel.

Sections on this tab

Today card. Shows today's workout name, exercise count, estimated time, training type. The Start button kicks off a guided session with timers.

Weekly Planner. Seven day-cards, today highlighted in yellow. Each card shows the assigned workout name and a preview of the first few exercises. Tap a day to assign, edit, or clear.

Template Manager. Quick-load presets Push, Pull, Legs, Upper, Lower, Full Body, and any templates you've saved. One tap loads the template into the builder.

Weekly Intelligence. Three at-a-glance numbers: total volume this week, current training streak, and a recovery readiness signal based on your health logs.

Auto Coach. A short, actionable suggestion for today based on recent training, recovery, and goals. Expand for more detail.

QUICK START

On any morning, tap Today's Start button. That's the fastest path from "open the app" to "first set logged" — about three taps total.

TAB WALKTHROUGH **WORKOUT**

Workout

The Workout tab is the builder. The left sidebar holds the exercise library; the main area is your current workout in progress. Add, reorder, edit sets, and save when you're done or tap Log to record it as a completed session.

Workout tab exercise library on the left, builder on the right.

Building a workout

- 1 Filter the library**
 Use the Push / Pull / Legs / Cardio chips at the top, or type in the search box. The Equipment modal lets you restrict the library to gear you actually have.
- 2 Add exercises**
 Tap any exercise in the library to add it to the builder. It appears as a card with default sets and reps you can edit.
- 3 Edit sets**
 Each card has rows for set number, reps, weight, and notes. Tap any field to change it. Use "Add Set" to add a row, or the X to remove one.

4

Reorder & duplicate

Use the duplicate button on any card to copy it. Drag handles let you reorder (desktop only on mobile, remove and re-add).

5

Save the workout

Tap Save in the header to store the workout in your library for reuse. Give it a name first by tapping Edit Name.

6

Log completion

When you're done training, tap Log. This records the workout as a completed session and feeds into your Progress tab.

WORKOUT CONTINUED

Workout types & guided sessions

Vertex supports three workout types, each with its own session UX:

Hypertrophy. Standard set-and-rep tracking. Built for muscle-building work bench press, rows, squats. Logs reps and weight per set.

Endurance. Time-based or high-rep tracking. Better for circuits, kettlebell flows, and conditioning blocks.

Cardio. Single-block tracking with duration, distance, and average HR (when health sync is on).

Starting a guided session

When you tap Start (either from the Today card on Home, or from inside the builder), Vertex opens a focused full-screen session view. You see the current exercise, a large timer, and the next exercise queued up. Tap Next when you finish a set; the rest timer starts automatically. Tap Close to exit and return to the builder your progress is saved.

MANUAL ENTRY

Need a one-off exercise that's not in the library? Use the Manual Entry modal (button in the sidebar). It adds a custom move to the current workout only without permanently expanding your library. Good for substitutes, rehab moves, or quick notes.

TAB WALKTHROUGH PROGRESS

Progress

Progress turns your logged workouts into trends. Volume over time, personal records, consistency, and per-exercise history — everything is calculated from your training logs, no manual entry needed.

Progress tab — volume trend chart and key stats.

What you'll see

Volume trend. A line chart of total weekly volume (sets × reps × weight) over the last 12 weeks. Look for a steady upward trend — not week-to-week, but over months.

Total volume. Cumulative weight moved this month. A blunt instrument, but useful for spotting deload weeks and surge cycles.

PRs this month. Count of personal records hit. Vertex auto-detects PRs by comparing each set against your prior best for that exercise + rep range.

Consistency. Percent of planned workouts completed. Below 70% and the AI Coach will start suggesting volume reductions; above 90% and it may push intensity.

Per-exercise history. Tap any exercise card to see its full history — every set you've ever done, charted over time.

REFRESH

The Refresh button at the top of Progress re-pulls your training logs from Supabase. Useful if you logged a workout on another device and want to see it reflected immediately.

TAB WALKTHROUGH HEALTH

Health

Health is where Vertex ingests the rest of the picture: sleep, weight, body composition, HRV, steps. You can log entries manually, or sync from Apple Health (and soon Oura) so they update automatically each morning.

Health tab daily metric tiles and the manual entry form.

Apple Health sync

Vertex includes an Apple Shortcut that runs each morning at 8:00 AM and pushes your previous-day metrics sleep, steps, HRV, resting heart rate to Vertex automatically. You only set this up once per device.

1

Get the Shortcut

Open Vertex on iPhone, go to Health tab, tap "Set up Apple Health sync". This downloads the Vertex Sync Shortcut.

2

Add the automation

In the iOS Shortcuts app, tap Automation, then Personal Automation, then Time of Day. Set 8:00 AM, daily.

3

Choose the action

For the action, select "Run Shortcut" and pick "Vertex Sync".

4

Disable "Ask Before Running"

This is critical otherwise the automation prompts you each morning instead of running silently.

MANUAL ENTRY

You can always log entries by hand from the form at the bottom of the Health tab useful for weight measurements, body composition (DEXA results), peptide doses, and notes that don't come from a wearable.

TAB WALKTHROUGH AI PLAN

AI Plan

The AI Plan tab pulls together everything Vertex knows about you — recent training volume, recovery signals, consistency, goals — and surfaces a small set of concrete recommendations for the week ahead. It's not a workout generator; it's a coach that reads your data and tells you where to push and where to back off.

AI Plan tab — actionable recommendations with one-tap apply.

How recommendations work

Each recommendation has a title, a one-line rationale, and an Apply button. Tapping Apply makes the suggested change directly in your planner — for example, "Reduce volume Friday" will drop one set from each movement on Friday's assigned workout. You can always undo from the Workout tab.

Refreshing the plan

The plan re-generates whenever you log a new workout, sync new health data, or tap the Refresh button at the top. It does not run continuously — the goal is stable recommendations you can plan around, not a constantly shifting target.

WHEN TO IGNORE IT

AI Plan recommendations are based on data, but data has blind spots. If you know you're sick, traveling, or just feel off, ignore the suggestions and listen to your body. The coach gets smarter the more you train — early on, take its advice as a starting point, not gospel.

REFERENCE 01

Account & sync

Vertex stores your account in Supabase. When you sign in, your saved workouts, planner days, training logs, and health entries all sync to the cloud and appear on every device you sign in from.

What syncs

Saved workouts. Every workout you save to your library, with full exercise lists, sets, and notes.

Weekly planner. Each day's assigned workout Monday through Sunday.

Training logs. Every workout you complete, with timestamps, sets, reps, and weights.

Health entries. Sleep, weight, body composition, HRV, and any manual entries.

Custom exercises. Anything you've added through the library customization tools.

What stays local

A few preferences live in browser storage rather than the cloud — your sidebar accordion open/closed states, the welcome modal seen-flag, and any in-progress workout you haven't saved yet. These are device-specific by design.

SIGN IN EVERYWHERE

Sign in on every device you use — phone, tablet, laptop. Vertex handles the rest. The same workout you planned on your laptop is ready on your phone when you walk into the gym.

Common tasks

A quick reference for the things you'll do most often. Bookmark this page.

TASK	WHERE	HOW
Start today's workout	Home tab	Tap Start on the Today card
Build a new workout	Workout tab	Tap exercises in the library to add them to the builder
Save a workout	Workout tab header	Tap Save (after naming the workout)
Log a completed workout	Workout tab header	Tap Log when training is finished
Assign a workout to a day	Home tab planner	Tap a day card choose Assign
Edit an exercise's sets	Builder card	Tap any rep/weight field to edit
Add a custom exercise	Workout tab sidebar	Tap "Add Exercise to Library" or "Manual Entry"
View your progress trends	Progress tab	Charts auto-populate from training logs
Log a health metric	Health tab form	Fill the form at the bottom and tap Save
Get an AI recommendation	AI Plan tab	Recommendations appear automatically
Sign out	Account menu ()	Top-right hamburger Sign Out

REFERENCE 03

Troubleshooting

A short list of things that occasionally go sideways and how to fix them. For anything not covered here, sign out and back in first — it solves more than you'd think.

Sync pill stuck on "Saving" or "Failed"

Your network dropped or Supabase hit a transient error. Refresh the page — your in-progress workout is preserved in browser storage and will reappear. If it still fails, sign out and sign back in to re-establish the auth token.

Welcome modal won't go away

Tap Get Started on the third step or Skip on any step. The modal closes and won't reappear. If it does come back, your browser may be in private/incognito mode where localStorage is cleared each session — switch to a normal window.

Today's workout shows as empty

You haven't assigned anything to today yet. Go to the Home tab planner, tap today's card, and either assign an existing workout or build a new one.

Apple Health data isn't showing up

Open the iOS Shortcuts app, find your Vertex Sync automation, and check that "Ask Before Running" is OFF. If it's on, the automation prompts each morning instead of running silently — and if you miss the prompt, no data syncs that day.

Installed PWA shows old content

Service worker caching can pin an older version. In the installed app, force a refresh (pull-to-refresh on mobile, +Shift+R on Mac, Ctrl+Shift+R on Windows). For stubborn cases, uninstall and reinstall the PWA.

Can't sign in with Google

Check that pop-ups are allowed for vertex-beta-five.vercel.app. Some browsers block the OAuth redirect by default. Allow pop-ups and try again.

STILL STUCK?

Vertex is in active development — bugs and rough edges are expected. If something's genuinely broken, the fastest fix is usually to sign out, refresh, and sign back in. For persistent issues, note what you were doing and reach out to Andre directly.

VERTEX END OF MANUAL

Train smart. Train consistently. Build the body you want.
